“MADE IN TEXAS”

What that means to Cornerstone Valve…

Cornerstone® VALVE
SEVERE SERVICE ENGINEERING

You often hear the phrase “Made in Texas” when talking about barbecue, cowboy boots, and country music. You hear it far less often where some of the state’s most important equipment is concerned — drilling equipment, piping, and valves. These are the products that make up the critical, and often dangerous, systems used to explore for, transport, and process oil and gas.

It has become common practice for operators to rely on foreign manufacturers for the components in those systems, driven largely by the hunt for the lowest unit price.

Substantial companies headquartered here in the United States reach to the UK, Italy, Germany, and across Asia for products destined for their most critical service — often with the cooperation of major manufacturers who have moved their own production overseas in pursuit of cutting cost.

At Cornerstone Valve, we buck the trend. From our headquarters and manufacturing facility in Missouri City, Texas, we design, engineer, manufacture, test, and deliver severe service valves to global markets. Nearly all raw material is sourced from local forge masters, machine shops, and suppliers — which means shorter lead times, direct control of quality, and full material traceability back to the melt.

That matters when the valve has to hold. Cornerstone valves have a reputation for long service life and low lifecycle cost, built with a can-do attitude and a customer-centric approach to quality.

What “Made in Texas” actually means here

- Engineered, machined, assembled, and tested under one roof in Missouri City.
- Domestic forgings and bar stock from Gulf Coast forge masters and mills.
- Full traceability — CMTRs and C of Cs on every component.
- Record retention for a minimum of ten years on every valve we build.
- Engineered-to-order: built to your specification, not a catalog compromise.
- In-house repair and certified field service, onshore or offshore.
- Operator and maintenance training available for your staff.
- Over 200 years of combined severe service experience, since 1990.

Certified to the standards our customers are audited against

Cornerstone Valve holds API Monogram licenses for API 6A (6A-0321, PSL 1, 2, and 3 — gate, ball, plug, and check valves), API 6D (6D-0164 — ball and gate valves), and API 6DSS (6DSS-0073 — subsea ball valves), with a quality system registered to API Specification Q1 and ISO 9001:2015 for the design and manufacture of severe service valves. Every valve is tested, fully cycled, and leakage-verified to the applicable API, ISO, and ANSI standards, and ships with a complete design and test data package.

Industries served

Oil & Gas (upstream, midstream, downstream) • Refining • Chemical & Petrochemical • Power Generation • LNG & Cryogenic • Mining • Pulp & Paper • Aerospace • Maritime & Defense • Waterworks
